

Overview of the DMP Tool and DMAC's Priority Plan

FAQ

Q: What is the DMP Tool?

A: The DMP Tool developed by the California Digital Library, is designed to provide funder-specific guidance to help researchers develop data management plans.

Q: What is the DMAC's Priority Plan?

A: DMAC would like you (trainees) to create a Priority Plan at the beginning of your research project. The Priority Plan documents the types and characteristics of data you expect to generate, statistical methods you anticipate using, and published datasets associated with the project. The Priority Plan is intended for administrative purposes only and is designed to require minimal effort and be easy to update over time.

Q: Why should we use the DMP Tool to create the Priority Plan?

A: The DMP Tool platform is repurposed to provide a customized template for creating your Priority Plan. You can update your Priority Plan in any phase of your project and add published datasets.

Q: What other benefits of using the DMP Tool?

A: Sharing your Priority Plan in the DMP Tool platform will save you time by providing us with additional information about your project and data when you consult with us on data management or statistical analysis. It will also help administrative staff to easily gather information about published datasets for reporting purposes.

Q: How will the Priority Plan/DMP Tool fit the research data lifecycle?

How to Use the DMP Tool Instructions

1. Go to the DMP Tool website: <https://dmptool.org/> and click on “Login” in the upper right corner.
2. Enter your hawkmail in the “Email address” field and click “Continue”.

The screenshot shows a login form titled "Login". It has a label "Email address *" above a text input field. Below the field is the text "For SSO, use your institutional address." At the bottom of the form is a dark blue button labeled "Continue". Below the button is a link: "Problems signing in? [Contact us.](#)"

3. The system will recognize your email address as being associated with the University of Iowa. Click “Sign in with Institution (SSO)”.

The screenshot shows a sign-up page titled "New Account Sign Up". It has a label "Email address" above a text input field containing "abc@uiowa.edu". Below the field is the text "Your address is associated with:". Underneath is the text "University of Iowa (uiowa.edu)". Below that is a dark blue button labeled "Sign up with Institution (SSO)". Below the button is the text "Sign up with non SSO". Further down is a paragraph: "This will create a new account. If you already have an account, [go back](#) to try a different email address, or [contact us](#)." At the bottom is a link: "Go back".

4. Enter your hawkID and password.

The screenshot shows a login page with a yellow background. At the top is a black box with the word "IOWA" in yellow. Below it is the text "Log in with your HawkID". There are two text input fields: "HawkID" and "Password". Below these fields is a black button labeled "LOG IN →". At the bottom is a link: "Forgot your HawkID or password?"

5. On “My Dashboard”, click the “Create plan” button. You’ll be taken to the “Create a new plan” page. You may not see a table of plans if it’s your first time to login.

My Dashboard

The table below lists the plans that you have created, and that have been shared with you by others. You can edit, share, download, make a copy, or remove these plans at any time.

Project Title	Template	Edited	Role	Test	Visibility	Shared	DMP ID	
Development for New Passive Sampler (Demo Only)	ISRP Data Management & Analysis Priority Plan	04-01-2026	Owner	☒	N/A	Yes	10.48321/D1D1F925DB	Actions

Create plan

6. Provide a title/name for this plan and keep the default research organization. A research project here is defined at the manuscript level as a complete study that culminates in an academic publication. You can use your manuscript title as the research project title.
- Select “No funder associated with this plan or my funder is not listed.” **This step is important because it will direct you to the ISRP Data Management & Analysis Priority Plan template.** Click the “Create plan”, and a blank plan will be created.

Create a new plan

Before you get started, we need some information about your research project to set you up with the best DMP template for your needs.

* What research project are you planning?

☐ mock project for testing, practice, or educational purposes

* Select the primary research organization

Research organization

- or -

☐ No research organization associated with this plan or my research organization is not listed

* Select the primary funding organization

Funder

- or -

☒ No funder associated with this plan or my funder is not listed

Create plan Cancel

7. Under the “Project Details” tab, fill out fields. Please select “NIEHS” as the funder and enter “P42 ES013661” as the grant number.

Funder

☐ I cannot find my funder in the list

Funding status

Funding opportunity number

Grant number/url

Save

8. Under the “Collaborators” tab, add the following DMAC members and David Purdy as DMP Collaborators with either “Editor” or “Read Only” permission so that we can access your plan:

andres-martinez@uiowa.edu; kai-wang@uiowa.edu; qianjin-zhang@uiowa.edu;
david-purdy@uiowa.edu

9. Under the “Write Plan” tab, expand sections and answer the questions. The guidance and example answers are also provided for your reference. In the “Published Datasets” section, you will need to add and update it when you publish a dataset. Please note that you will need to click “Save” button to save everything you enter because the platform cannot auto-save the information. All questions can be found in Appendix A. If you’re not sure how to answer these questions, please ask your PI and DMAC.

10. Please **ignore** the “Request feedback” tab, as it sends messages to lib-data@uiowa.edu at the Main Library, not DMAC.
11. Under the “Download” tab, it’s highly recommended that you download a version of your plan once it is finished or before making any significant changes.
12. **Optional:** Under the “Finalize” tab, you can set your plan private. To register your plan, click “Register plan” to obtain a DOI (DMP ID). Note that at least 50% of your plan must be completed before you can register. This step is important because registering your plan enables the “Follow-Up” tab to appear. Please refer to #13 for retrieving datasets by adding dataset DOIs in the “Follow-Up” tab.

Register your plan for a DMP ID

DMP IDs are DOIs designed specifically for data management plans. By registering, you'll be able to link which will make it easier to show that you met your funder's requirements by the end of the project.

In order to register your plan you must have completed the following:

- ✓ only the creator of the plan may register a DMP ID.
- ✗ have answered at least 50% of questions on the [Write Plan](#) panel
- ✓ identified your funder on the [Project Details](#) panel
- ✓ linked your DMP Tool account to your ORCID via your [Third party applications page](#)
- ✗ make sure the plan is not flagged as a mock project on the [Project Details](#) panel

Register plan

13. **Optional:** Under the “Follow-Up” tab, add research outputs by entering a DOI or other URL based identifier. If you enter an DOI, make sure you start with “https://doi.org/”

Research Outputs

Link this plan to research outputs the project has generated– such as journal articles, preprints, datasets, data papers, and software. URL-based identifier has been assigned to it.

Please note that it can take several seconds to retrieve the citation after you add a new DOI.

Appendix A: Preview of the Priority Plan

Project Overview

1. **Which ISRP Project are you in?**
2. **Provide a brief description of your project, including any specific hypotheses (if available at this stage), potential collaborators, and a potential manuscript title.**

Example answer:

Hypothesis: Can our new passive sampler material (PAN) effectively capture individual PCB congeners in air, water and sediment?

Potential Collaborators: Sean Brobston, Hans Lehmler

Manuscript working title: Antibiotic Optimization to Generate Pseudo-Germ-Free Mice (GPGF)

Data Management

1. **What kind of key research data is anticipated to be generated (or collected) during the project, including the species and modality, (e.g., chemical data, human genomic data, rat functional magnetic resonance imaging data)? And from what instruments (e.g., GC-MS/MS instruments)?**

Example answer:

This project will generate chemical data consisting of the mass and concentration of individual PCB congeners in air, water, and sediment captured by the passive sampler material (PAN). Uptake and equilibrium experiments will be conducted. Individual PCB congeners will be identified and quantified using GC-MS/MS with the internal standard method.

2. **What specialized tools, software, and/or code (e.g., Excel, R, Python) are needed to access or manipulate the data?**

Example answer:

Excel, R, and RStudio are recommended software tools for accessing, managing, and analyzing the data.

3. **What maximum appropriate portion of your research data underlying your peer-reviewed publications and other findings can be shared?**

Example answer 1:

All scientific data generated from this project will be made publicly available upon publication of the associated manuscript.

Example answer 2:

De-identified, aggregate data rather than individual level data will be made available for general use through a user purposes. agreement. An associated record will be created in a data repository for discovery

4. If you anticipate that sharing will be limited in some other way, please describe these limitations and the ethical, legal, or technical factors for them.

Example answer 1:

There are no anticipated factors or limitations that will affect the access, distribution or reuse of the scientific data generated by the proposal.

Example answer 2:

Sharing will be limited by the Institutional Review Board (IRB) because the data involves human subjects' names, mail addresses, body weight and height, and age. Also, the participants signing an informed consent may prohibit non-aggregated data sharing.

Example answer 3:

Sharing will be limited by the technical factor because the data size will be a dozen terabytes. An associated record will be created in a data repository for discovery purposes. We will accommodate access upon request through our IT service.

5. If your data derived from human research participants will be shared, how will you protect participant privacy?

Example answer 1:

Not applicable.

Example answer 2:

Only members of the research project team will have controlled access to all audio recordings and transcriptions. Any data shared will be de-identified by removing names, addresses, and any potentially identifying information. Only aggregated rather than individual level data will be shared.

Example answer 3:

The data are fully de-identified by removing all HIPAA-protected direct and indirect identifiers. The original DICOM files are converted to compressed .nii.gz / .json using dcm2nii (<https://github.com/rordenlab/dcm2nii>) with the anonymization option according to BIDS guidelines.

6. List repositories where your research data may be shared.

Laboratory-generated data without geolocation components will be deposited in Iowa Research Online (<https://iro.uiowa.edu/esploro/>). Data containing geospatial information will be archived in PANGAEA (<https://pangaea.de/>), which supports the long-term preservation and dissemination of environmental and georeferenced datasets.

Data Analysis

- 1. What statistical analyses will be conducted for each data type, including power analyses and other relevant methods? Will you need assistance from DMAC?**

Example answer:

- *ANOVA 2-way, Bonferroni adjustment*
- *Will need to do alpha and beta diversity analysis for microbiome data*
- *Principle component analysis*
- *Omics data integration*

Published Datasets

- 1. Please select the key types of scientific data anticipated to be generated during the project.**

- Imaging data
- Demographic data (animal weight, sex, age, treatment)
- Sequencing data
- Mass Spectrometry data
- Chemical data (PCB concentration)
- Animal behavior testing data
- Omics data (microbiome)
- Other, please specify in the additional information box below

- 2. Please select the study subject.**

- Human
- Rat
- Mouse
- Bacteria
- Other, please specify in the additional information box below

- 3. Please select the data source.**

- Field
- Lab
- Other, please specify in the additional information box below

- 4. Please select the data file format.**

- Csv
- Prism
- Other, please specify in the additional information box below

- 5. Please specify the repository for data publishing.**

- Iowa Research Online

- Pangaea
- Database of Genotypes and Phenotypes (dbGaP)
- BioData Catalyst
- The NHGRI Genomic Data Science Analysis, Visualization, and Informatics Lab-Space (AnVIL)
- National Cancer Institute (NCI) Genomic Data Commons
- Cancer Research Data Commons (CRDC)-Trusted Partner
- PEGS: Personalized Environment and Genes Study
- NIMH Repository and Genomics Resources (NRGR)
- Zenodo
- Other, please specify in the additional information box below

6. Please provide the data DOI.

The instructions were created on April 6, 2026, and updated on August 3, 2026.
